

Xtrac® Treatment Overview

HOW IS THE XTRAC® EXCIMER LASER SYSTEM DIFFERENT?

XTRAC® uses a carefully focused beam of laser light delivered through a sophisticated liquid light guide delivery system. Because it concentrates light on active lesions, XTRAC® delivers high-exposure doses necessary for rapid clearing without risk of damage to healthy skin.

WHO IS A CANDIDATE FOR XTRAC® TREATMENT?

Individuals with mild to moderate psoriasis can often obtain relief in just four to ten brief treatment sessions. Patients may see some results after just one treatment.

HOW LONG DO TREATMENT SESSIONS LAST?

Most treatment sessions last only a few minutes – in fact, less than five minutes.

WHAT HAPPENS DURING AN XTRAC® TREATMENT?

First, our provider will determine the patient's optimum starting dosage level. Then the XTRAC® hand piece is moved over the affected area, applying laser light at the determined dose. Depending on the area to be treated, this only takes a few minutes. Generally, there is no pain during treatment. After treatments, a mild sunburn-type reaction is often experienced at the treated areas.

Revolutionary Treatment

XTRAC® EXCIMER LASERS

One of the most exciting new developments in the treatment of mild to moderate psoriasis is targeted excimer laser phototherapy. Finally psoriasis sufferers can enjoy long lasting, effective relief from the painful disfiguring symptoms of psoriasis in just a few short treatments. With the revolutionary XTRAC® excimer laser system, psoriasis sufferers can feel good about themselves again, without worrying about lengthy time commitments or harmful side effects. Just a few minutes with XTRAC® could change their life.

Targeting Psoriasis

DOES IT MAKE ANY DIFFERENCE WHERE THE LESIONS ARE?

Due to its “site-specific” targeting, the XTRAC® system can be used successfully on hard-to-treat areas of the body such as elbows, knees, and even the scalp without any concern for harming the hair.

Lasting Results

HOW LONG WILL AN XTRAC® PATIENT STAY FREE OF OUTBREAKS?

Each case is unique, but many psoriasis sufferers who have experienced XTRAC® treatment have found that relief usually lasts for several months and can last up to six months or more. Often remissions will last as long as with conventional phototherapy, but with fewer treatments per year to remain free of symptoms.

The Results

THE RESULTS SPEAK FOR THEMSELVES!

Many psoriasis sufferers who have experienced the benefits of the XTRAC® treatment can't stop raving about the results. After just a few short laser treatments, they're experiencing relief – many for the first time in years! Trillium Creek is pleased to offer this advanced treatment.
